

AMMONIA REMOVER

for Aquariums

Aqualife AMMONIA REMOVER employs a proprietary chemical agent to detoxify ammonia and chloramine. Chloramine is first chemically de-coupled. **Aqualife AMMONIA REMOVER** then detoxifies both the ammonia and chlorine. Eliminates toxic ammonia and chlorine before they can impact the health of your fish. Reduces the load on biological filters and prevents accumulation of harmful nitrite. Always use **Aqualife AMMONIA REMOVER** to condition tap water, when making water changes, or after adding new fish to the aquarium. **Aqualife AMMONIA REMOVER** instantly "ages" water, making it safe for delicate aquatic life.

- Instantly removes toxic ammonia
- Works in freshwater or saltwater
- Concentrated formula
- Will not affect protein skimmer performance
- Also removes chloramines
- Safe for all aquarium inhabitants

Dosage: Add 1 teaspoon (5 mL) per 10 gallons. One fluid ounce (30 mL) treats 90 gallons of water

Product: Ammonia Remover

Category: Additives and Supplements, Aquarium
Unique Product Features: **Aqualife Ammonia Remover** can be used to remove ammonia from aquarium water or to condition tap water containing chloramine for aquarium use.

Packaging: 16 fluid ounce bottle treats 1440 gallons

Product Rationale

Ammonia in aquarium water, whether the result of chloramine breakdown or interruption of biological filtration, stresses fish and can cause death from ammonia poisoning. **Aqualife Ammonia Remover** instantly detoxifies ammonia when used as directed. Excess chemical remains in solution to destroy ammonia as it is produced.

PRECAUTIONS: Use in conjunction with an accurate ammonia test kit. Add recommended dosage, then test to determine if all ammonia has been eliminated. Re-treat as necessary.
